

# DMDD(Homework-02)

1) Installed SQL Server using Docker container on Mac:

2) Installed Azure Data Studio to connect to SQL Server DB Engine:

### 3) Proof of successful connection using the query: "SELECT @@SERVERNAME"

The screenshot displays the SQL Server Enterprise Manager interface. The left-hand pane shows the 'NOTEBOOKS' section with a search bar and a list of notebooks. The main workspace shows a query editor with the following SQL query:

```
1 SELECT @@SERVERNAME
2
```

The query is executed, and the results are displayed in the 'Results' pane at the bottom. The results show a single row with the value 'sqldb'.

	(No column name)
1	sqldb
